

手写VIO第七章思路讲解

作业

作业

- ① 将第二讲的仿真数据集(视觉特征, imu 数据)接入我们的 VINS 代码,并运行出轨迹结果。
 - 仿真数据集无噪声
 - 仿真数据集有噪声(不同噪声设定时,需要配置 vins 中 imu noise 大小。)

1 将第二讲的仿真数据集 (视觉特征, imu 数据) 接入我们的 VINS 代码, 并运行出轨迹结果。

1、数据预处理:

将第二讲中的vio_data_simulation放在~/VINS-Course/src中,然后编译vio_data_simulation:

```
cd vio_data_simulation-master
mkdir build
cd build
cmake..
make
cd../bin
./data_gen
```

编译后vio_data_simulation/bin中可生成右侧所示文件:

将第二讲的仿真数据集(视觉特征, imu 数据)接入我们的 VINS 代码、并运行出轨迹结果。

VINS 深蓝学院 shenlanxueyuan.com

- 2、修改代码:
- 2.1将imu数据传入vins系统:

2.2将图像数据传入VINS系统

```
void PubImuData()
        string sImu data file = sConfig path + "imu pose noise.txt";
        cout << "1 PubImuData start sImu data filea: " << sImu data file << endl;
        ifstream fsImu:
        fsImu.open(sImu data file.c str());
        if (!fsImu.is open())imu pose noise.txt
                cerr << "Failed to open imu file! " << sImu_data_file << endl;
                return;
 void PubImageData()
         string sImage file = sConfig path + "cam pose.txt";
         cout << "1 PubImageData start sImage file: " << sImage file << endl;
         ifstream fsImage:
         fsImage.open(sImage file.c str());
         if (!fsImage.is open())
                 cerr << "Failed to open image file! " << sImage file << endl;
                 return;
```

1.1 仿真数据无噪声

将euroc_config.yaml文件中关于加速度计和陀螺仪的零漂和噪声都设置为0.

1.2 份真数据有噪声

将euroc_config.yaml文件中关于加速度计和陀螺仪的零漂和噪声都设置为不为0的数.

1.3 设定噪声的不同config参数

感谢各位聆听 Thanks for Listening
